

X11 PRO.

Toolboxes to meet your needs.

Background

X11 original has been a staple part of AGAs range of welding equipment for more than 50 years, due to the high level of customer satisfaction that it's quality generates. The shape has evolved over the years, but its great performance remains unchanged. We have now taken a further step in toolbox development. You should only pay for what you really need and so we have developed three different toolboxes based on individual user needs.

X11 PRO

A toolbox designed with premium in mind for basic welding needs. It's suitable for you who are working in car mechanics or in farming, where welding is not the focus of the daily business. It's a handy toolkit for cutting, welding, brazing and heating. For the first time a heating attachment and gas lighter are included.

X11 PRO FLEX

A toolbox for you who are working in a mobile setting, such as in plumbing or as a refrigerant technician. The toolbox is easy to carry around and contains flexible welding attachments suitable for welding or brazing pipes. A gas lighter and equipment for cutting and heating are also included.

X11 PRO PLUS

This is the successor of the original X11. Developed for the professional welder, who regularly work with cutting or welding within Small-to-Medium Enterprises, needing a complete toolbox that is easy to use and carry around. We have now extended the X11 PRO PLUS with heating attachment, cutting support and gas lighter.
